

In the Abstract

Abstract

This is a configurable eyewear system that has at least one temple member, at least one lens, [and] a pair of mating members, and a connector. The at least one temple member and the at least one lens are rotatably connected by coupling [the] at least one first mating member and [said] at least one second mating member with the connector. The invention also has at least one containment structure and at least one lens that is rotatable within the containment structure. The invention further includes an eyewear lens that has a rotator and an eyewear lens that has an anchor cut-out. In addition, the invention includes an eyewear lens, that has at least a first prescription, an interior side and an exterior side on flip sides of the lens, wherein the viewing effect of the first prescription exists from the interior side and from the exterior side.
